Changes at NETWORK ADMINISTRATION

As many of you are aware that Ms. Pari berry was due for the retirement. Finally she has decided to hang up her boots and take the retirement. Pari was associated for 8 years with this company and we thank her for her valuable contribution and dedicated service in Network Administration.

We will surely miss her and we wish her all the very best for her personal endeavors!

Ms. Kuntal Singh has joined the Network in place of Ms. Pari Berry

She has experience of more than 15 years and has been associated with companies like Agility Logistics, 20Cube Logistics, ACCI, DB Schenker in customer service and Key Account Management .

We welcome Ms. Kuntal Singh on board and look forward to working with her. She is reachable on;

Mobile # - +91 86521 80777

Email id – kuntals@hcllogistics.eu

Skype id – Kuntal.singh HCL

Pari's email id will be continued for some time and emails sent on her id will also be Answered.

Seasonal measures– Australia

Latest updates: **Brown Marmorated Stink Bug (BMSB) 2019-2020**

The department has finalized the seasonal measures for the 2019-20 BMSB risk season.

In response to the rapid expansion of BMSB throughout Europe and North America, the department has strengthened the seasonal measures to manage risk of BMSB from arriving in Australia for the 2019–20 BMSB risk season. The department has used a range of scientific, intelligence and evidence based information when setting the measures including data collected from the 2018-19 BMSB season onshore verification activities.

The department has also worked closely with the New Zealand Ministry for Primary Industries on the 2019-20 measures to ensure both Australia and New Zealand's BMSB seasonal measures are consistent across the two countries where possible.

For the 2019-20 BMSB risk season, measures will apply to:

- certain goods manufactured in, or shipped from target risk countries, and/or
- vessels that berth at, load or transship from target risk countries

from 1 September 2019 and that arrive in Australian territory by 31 May 2020 (inclusive).

As with previous BMSB risk seasons, you must comply with these measures. Throughout the season we will continue to review these measures based on detections of BMSB and the risk pathways and make any necessary adjustments.

Please find more information on the below:

industry information sessions page.

I hope this has you well informed and updated.

Should you have any further queries or questions please do not hesitate to contact us.

Kind Regard,

The Team at DSH Global Logistics

Delhi Airport is expanding!

IGI airport to have 4 runways, facial recognition, self-baggage drop; top 10 facts

FINANCIAL EXPRESS Debjit Sinha, Financial Express

Once this expansion project culminates, Delhi Airport would become the first airport in India to have four runway

Delhi's Indra Gandhi International (IGI) Airport is expanding – with more flights, better passenger services convenience and seamless connectivity! India's busiest airport, the IGI airport, in the national capital will be made future-ready soon, according to the Delhi International Airport Limited (DIAL). With an additional runway, more state-of-the-art facilities, and enhanced passenger handling capacity, the upgradation process of Delhi International Airport (DEL) will be completed by June 2022, DIAL has said.

Delhi IGI Airport expansion: Top facts passengers should know

1. DIAL, that runs the Delhi Airport, has exuded confidence that passenger handling capacity will go up to 100 million passengers per annum (MPPA) by 2022. It said that once the project is completed airside handling capacity would go up to handle 140 MPPA. To simply put things, DIAL has stated that in the future, the Delhi airport would be able to handle 140 million passengers per annum. In 2018, Delhi Airport handled 69.8 MPPA, as per official data released by DIAL.

2. The development works would be carried out as part of Phase 3A. The Arrival and Departure terminals of Delhi Airport would be integrated under a single roof. This will form the new integrated Terminal 1. Along with this, there will be an increase in security screening systems and baggage handling. Once the project is completed, the total area of Terminal 1 will be 192,985 sqm from the existing 64,140 sqm. Following the integration of the two aforementioned terminals, passenger handling capacity would go up from 20 MPPA to 40 MPPA.

3. The integrated terminal would offer several passenger-friendly facilities. These are Self Baggage Drop (SBD) kiosks, Facial Recognition, Automated Tray Retrieval System (ATRS), and Common Usage Self Service (CUSS). These facilities driven by advanced technologies would ensure that there will be less long queues and will ease the flow of passengers.

4. There will be a new T1 Apron, fourth runway, dual elevated Eastern Cross Taxiways (ECT). Landside developments for circulation and connectivity improvements and T3 modification works would also be carried out.

5. On the Landside, a flyover would be constructed at Aero city metro station junction. This will reduce travel time from T1 to T3. Apart from this, the Central Spine Road would be widened from 8 lanes to 12 lanes. A realignment of a section of the Radisson Road to the tune of 1 km, with an underpass would be done.

6. There would be additional lanes to Terminal Departure ramp as well as the Arrival Forecourt. A dedicated corridor for cargo movement in and out of the airport will be constructed. A flyover close to NH8 will be constructed. This would segregate the heavy vehicle movement from passenger vehicles.

7. Once this expansion project culminates, Delhi Airport would become the first airport in India to have four runways as well as dual ECT.

8. As per the plan, the entire T1 Apron would be demolished. Subsequently, an expanded apron would be constructed to provide higher capacity layout with 82 Code C stands. This will include 22 Contact Stands and 8 MARS stand. These will cater to the increased Air Traffic Movements (ATMs).

9. The new T1 Apron will also be equipped with latest technological facilities such as Ground Power Units, Pre-conditioned Air, Visual Docking Guidance System, Fuel Hydrant System etc.

10. Following the project, the International transfer area of Terminal 3 will increase. A 7th check-in island is being added in T3 with associated Baggage Handling Systems and 2 Arrival Carousels. For passengers' facility, the IT systems of the entire Baggage Handling System of T3 are being upgraded. With all these enhancements, the passenger throughput of T3 would go up from 34 MPPA to 45 MPPA. Engineering firm, Larsen & Toubro (L&T) has been entrusted with the entire project of Phase 3A.
